

SILESTONE®

by COSENTINO

Silestone è una superficie a ridotto contenuto di silice composta da minerali premium e materiali riciclati. La sua rivoluzionaria tecnologia Hybriq+® riduce efficacemente il contenuto di silice cristallina, ottenendo una superficie minerale innovativa, sostenibile e ad alte prestazioni. Nel 2020 abbiamo lanciato la nostra rivoluzionaria tecnologia Hybriq+®, che riduce drasticamente il contenuto di silice cristallina nella composizione di Silestone, unendo minerali di alta qualità e materiali riciclati per creare una nuova categoria di prodotti: le superfici Mineral Hybriq+®.

Silestone è una superficie non porosa e altamente resistente alle macchie da caffè, vino, succo di limone, olio d'oliva, aceto, trucco e molti altri prodotti di uso quotidiano. HybriQ+ ® è una tecnologia innovativa brevettata da Cosentino per la produzione del nuovo Silestone. Una nuova miscela ad alte prestazioni di minerali premium e materiali riciclati prodotti per mezzo di un processo di produzione sostenibile, con il 99% di acqua riciclata ed energia elettrica da fonti rinnovabili.
